

Abhijeet Mittal

Director, Category at Mosaic Wellness (Man Matters). I build at the intersection of consumer health, D2C, and AI. The career has moved from data science to founding companies to owning categories, but the question hasn't changed: what makes a person choose a brand, trust it, and come back?

01 / D2C AND HEALTH

Owning a consumer health category, end to end.

At Mosaic Wellness I run a consumer health category with full P&L ownership. The job connects consumer insight, product, growth, content, marketplaces, performance marketing, and retention. A consumer brand is a chain of promises, and all of those parts have to agree. I like owning the whole chain. The number I care about is the second purchase, not the first click.

Man Matters sells to men who don't want to be patients. The work is making it feel less like booking a doctor and more like buying a skincare product. Get that right and people stay.

Built before this

Before Mosaic I co-founded MoovFarm and ran growth as Chief Growth Officer for four years, building for rural India with backing from Accel and Aditya Birla. Four years of that teaches you something a spreadsheet can't: how product, distribution, trust, capital, and execution collide once they leave the model. Earlier I worked on Erth.ai, an early company on dairy traceability, and started out as a data scientist at Sigmoid and a business consultant at Sears Holdings India.

Health is personal first

Health didn't begin as a category for me. It began as a problem I was living. I tried to lose weight five times in ten years and failed every time, while playing tennis and training through the whole decade. The fix was food, not effort. I lost 11kg, from 90 to 79, in four months. My running pace went from 11 min/km to 5.1. Body fat went from 27 to 19. I wear a CGM, track HbA1c, and read constantly on nutrition, recovery, sleep, and longevity. I care most about how a health number turns into behaviour someone can actually hold, because that is the hard part of any health product.

02 / THE AI LAYER

Make a small team think with more range.

Data science is where I started, so AI isn't a trend I'm reacting to. It's the layer I run the rest of the work through. I use it for market research, category strategy, consumer analysis, and operating documentation. The goal is not automation for its own sake. It is better context before a human makes the call.

SELECTED THINGS I'VE BUILT

01 The 1000cr D2C Operating Map

Every function a lean, AI-native team has to cover, split into AI-assisted and human-led work. 12 functions, 96 tasks, with an AI playbook for each.

02 The AI Employee Builder

A framework for designing a fully agentic AI employee: a job, context, tools, workflows, guardrails, tests, and a 30-day rollout.

03 Your first agent

A step-by-step guide to handing your first recurring task to an agent, the way a lean team actually starts.

04	Temple "Entropy", by first principles A skeptical, source-backed breakdown of Deepinder Goyal's wearable claim: what holds up, what is overstated, and what is unproven.
05	Earlier machine learning work Demand forecasting with XGBoost, a cattle facial recognition app, and transfer learning in Keras on custom data.

03 / THE PATH

Built through different vantage points.

2024 → now	Director, Category Mosaic Wellness / Man Matters · Mumbai. Full P&L ownership of a consumer health category.
2020 → 2024	Co-founder and Chief Growth Officer MoooFarm · Gurugram. Built and grew for rural India. Backed by Accel and Aditya Birla.
2019 → 2020	Co-founder Erth.ai · Gurugram. Technology for dairy traceability.
2019	Data Scientist Sigmoid · Bengaluru. Models and large datasets, turned into decisions.
2017 → 2019	Business Consultant Sears Holdings India · Pune. How commercial questions become operating choices.
2013 → 2017	Production & Industrial Engineering + Computer Science IIT Roorkee.
