

Abhijeet Mittal

Director, Category at Man Matters (Mosaic Wellness). I run a consumer health category with full P&L. Before that I co-founded a Series A startup that raised over ₹150 crore from Accel, the Aditya Birla Group, and other investors. I came up through data science, and I still build. One question runs through all of it: what makes a person choose, trust, and come back?

01 / D2C AND HEALTH

Owning a consumer health category, end to end.

At Man Matters (Mosaic Wellness) I run a consumer health category with full P&L. The job is the whole chain: consumer insight, product, growth, content, marketplaces, performance marketing, and retention. A consumer brand is a chain of promises, and all of those parts have to agree. Reach is easy to buy. Repeat is the only number that compounds.

Built before this

I co-founded MoooFarm and ran growth as Chief Growth Officer for four years. We raised over ₹150 crore from Accel, the Aditya Birla Group, and other investors, building for farmers most software ignores. Four years of that teaches you what a model can't: how product, distribution, trust, capital, and execution collide in the real world. Earlier I worked on Erth.ai in dairy traceability, and started out as a data scientist at Sigmoid and a consultant at Sears Holdings India.

Health is personal first

Health didn't begin as a category for me. It began as a problem I was living. I tried to lose weight five times in ten years and failed every time, while playing tennis and training the whole decade. The fix was food, not effort. I lost 11kg, from 90 to 79, in four months. My running pace went from 11 min/km to 5.1. Body fat went from 27 to 19. I wear a CGM, track HbA1c, and read the research myself. I run a health category the way I run my own health: test it, watch the data, keep what works.

02 / THE AI LAYER

Give a small team the range of a big one.

Data science is where I started, so AI isn't a trend I'm reacting to. It's the layer I run the rest of the work through. I build with it, I don't just prompt it. The aim is plain: a 10-person team that operates like an 80-person one.

SELECTED THINGS I'VE BUILT

01 The 1000cr D2C Operating Map

Every function a lean, AI-native team has to cover, split into AI-assisted and human-led work. 12 functions, 96 tasks, with an AI playbook for each.

02 The AI Employee Builder

A framework for designing a fully agentic AI employee: a job, context, tools, workflows, guardrails, tests, and a 30-day rollout.

03 Your first agent

A step-by-step guide to handing your first recurring task to an agent, the way a lean team actually starts.

04 Temple "Entropy", by first principles

A skeptical, source-backed breakdown of Deepinder Goyal's wearable claim: what holds up, what is overstated, and what is unproven.

05 Earlier machine learning work

Data science to founding to full P&L.

2024 → now	Director, Category Man Matters (Mosaic Wellness) · Mumbai. Full P&L ownership of a consumer health category.
2020 → 2024	Co-founder and Chief Growth Officer MoooFarm · Gurugram. Series A for rural India. Raised ₹150 cr+ from Accel, the Aditya Birla Group, and others.
2019 → 2020	Co-founder Erth.ai · Gurugram. Early technology for dairy traceability.
2019	Data Scientist Sigmoid · Bengaluru. Models and large datasets, turned into decisions.
2017 → 2019	Business Consultant Sears Holdings India · Pune. How commercial questions become operating choices.
2013 → 2017	Production & Industrial Engineering + Computer Science IIT Roorkee.
